Research Paper Assignment

Michael D. Lee

Goal of Report

- The goal of the report is for you to find your own data set, and analyze it using a cognitive model in JASP
  - Abstract: One paragraph (150 words maximum). A summary of the your paper. [5%]
  - Introduction: One or two paragraphs (300-500 words). Explain the context in which the data were collected, and why they are interesting or useful. Say why the model that will be applied is a relevant one for these data. [10%]
  - Data: One or two paragraphs (300-500 words). Describe the format of the data in a precise way. [25%]
  - Results: Three or four paragraphs, plus figures or tables as appropriate. (500-1000 words). Apply the model and present the results. Use subsections if appropriate. Interpret each of the results in terms of the question you analysis is attempting to answer. [50%]
  - Discussion: One or two paragraphs (300-500 words). Relate the results in an integrated way back to what is interesting and important about the data, as presented in the Introduction. [10%]

Finding Data

- Any data set that involves people's behavior, and is appropriately analyzed by the model you choose, is acceptable:
  - sometimes journal papers or book chapters provide the required data in a table in the publication itself
  - often researchers make data from their experiments online. It may be posted on their web pages, or in a repository like the Open Science Framework (OSF)
  - there are repositories like Kaggle of interesting data sets, some of which involve human behavior
  - it is often possible to "scrape" or otherwise collect data directly from an online source
- You only have to analyze one data set in terms of one model, but you could
  - analyze multiple data sets in terms of the same model
  - analyze the same data sets with multiple models
- Only attempt what is feasible in the time and space constraints

Using LaTeX

- The scientific report must be prepared using the LaTeX
  - you have free access to the professional edition of Overleaf via UC Irvine
- Use the provided template with some minimal instructions here
  - make sure that YOU MAKE YOUR OWN COPY before you start editing it
  - Overleaf provides good online help
  - there are also many LaTeX resources on the web
  - LLMs can help a lot too, if used carefully
- The maximum number of words for the report is 2500 and goal is 2000–2500 words
  - Overleaf will count the words for you
